Let's talk about
CBD

Why BioEase

Leading provider of full spectrum hemp extract (CBD) to health & wellness practitioners

Lab tested, certified, and validated to ensure you are receiving the highest quality products

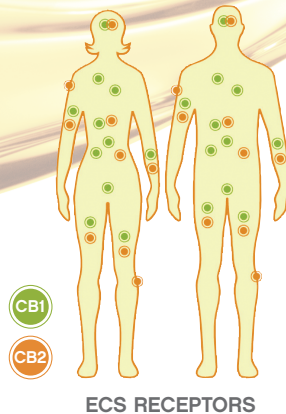

THE ENDOCANNABINOID SYSTEM

The Endocannabinoid system (ECS) is one of the most important systems in your body. The ECS promotes homeostasis, the body's self-regulating process to maintain balance and optimize health across biological systems. The beneficial cannabinoids and compounds found in full spectrum and broad spectrum hemp extract have been shown to work with the ECS to bring the body back to homeostasis.

THE ECS HELPS IN REGULATING:

- Anxiety
- Appetite/Hunger
- Depression
- Digestion
- Immune Function
- Memory
- Mood
- Motor Control
- Pain
- Pleasure & Reward
- Sleep
- Temperature Regulation

Frequently Asked Questions

WHAT IS CBD?

CBD, short for cannabidiol, is found in the cannabis plant. Cannabis is a plant category that includes hemp and marijuana which means you can get CBD from both hemp and marijuana. CBD isn't the only cannabinoid found in cannabis; in fact over 100 cannabinoids have been discovered so far. We are focused on the CBD that comes from hemp; a plant that has been used for centuries by many cultures which won't get you high.

IS CBD LEGAL?

Yes, when properly derived from industrial hemp, CBD is federally legal in all states. To be legal, the THC level (the cannabinoid which produces the "high" feeling) must be less than 0.3%.

HOW DO I TAKE CBD?

There are many ways you can take CBD. The most common are tinctures (oil droppers), which are used under the tongue, softgels, and topical applications such as a salve or lotion.

WILL I FEEL HIGH AFTER TAKING CBD?

No. While there are over 100 known cannabinoids produced by the hemp plant, cannabis is identified by its two active ingredients: THC and CBD. THC is the only molecule in the cannabis family with an intoxicating component. It's the only one that will make you feel "high". CBD, even at extremely high doses, will not make you feel "high".

Created by nature, backed by science

Full spectrum hemp extract refers to the pure oil extracted from the whole hemp flower.

The compounds in our hemp extract include an array of beneficial cannabinoids, essential vitamins and minerals, fatty acids, flavonoids and terpenes, all of which are absent from CBD isolate. We believe, and research shows, these compounds work more effectively when presented together in a specifically designed, synergistic manner.

At BioVern Labs, we only use premium whole flower extract to produce true full spectrum and broad spectrum products for optimal health and wellness.

Quality + Transparency

BioEase adheres to best practices of the industry by providing clean, safe hemp derived from CBD oil. Hemp is lab tested prior to processing and CBD oil is tested by an unrelated, third party lab and validated by our in-house lab. This establishes the quality and safety transparency of the ingredients in our products.
